Crimson wrote on Tue, 07 November 2006 02:52It's a MySQL database... I do the mysqldump command. I'm not sure how to do incremental.
As the date and time of a post is stored, I guess it wouldn't be all that difficult. You just need to figure out which info you need, then link everything together with the id's (like the forum does) for every post made after the last backup.

Should be a PHP-script that's fairly simple to make considering you study the FUD database a bit. Heck, my news script for Rencommunity could prolly help you out a bit as well .
