icedog90 wrote on Sat, 11 November 2006 15:09 I like to use 1.7mbps or higher. I think lower than even 1.5mps is ugly as hell. It probably doesn't bother you, but I'm an artist and I don't like it when my videos lose a certain amount of quality.

Also, you can still export a video in movie maker to 1.5mpbs at 640x480. I've done it numerous times when I was a newbie.

Er... apparently my vids are 640x480 through the default preset bitrate setting, I just must have remembered it wrong >.< Anyway, I don't see how 1.7Mbps works when compressing a Fraps vid, because the raw files are 1411kbps according to the file properties. Can you actually increase the bitrate when converting from .avi to .wmv?
