danpaul88 wrote on Sun, 12 November 2006 12:08I would never have thought MORE ram could cause problems with applications... perhaps it is something else you changed that happened to be around the same time as the ram upgrade?

Me neither, but I read halflife had the same problem when you have more than 4 gig of ram but they fixed it.

However, I think in this case it's a third party tool, like renguard or custom scripts.dll, which causes Renegade to crash.
