RenGuard is not supported on Win2K, you will have to wait for RG 1.04.

Generally, if it's not working on your Win2K setup now, it's not going to. You can try what a few people has said works for them and open & close it 50 odd times until it loads properly, or just pick a server with decent moderators. n00bstories and thekoss2 are my servers of choice.
