ohmybadIf I have box and it is 43 in length what unit of measurement is it? cm? mm? what?

thanks

It all depends on what your setup in RenX is set to. If you use feet, Havoc is about 6 feet tall. To change your units, click on Customize at the top too bar, then goto units setup click U.S. Standard, then Feet will set it up for Feet as described above. Or you can set it to something different.
