I have a registration question for the n00bstories/Renforums TS server.

I registered my name (frijud) the first time I logged in. It changed the letter after my name from U or R. Yesterday I logged in and it again had the U after my name. When I tried to register my name again it said that that name was already in use.

Is there some setting that I am unaware of that will allow me to register my nickname? This may come important one Blazer gets the TS utility out.

Thanks!!!
