(and fun could include make the game look nicer) but those bright skins and other stuff which you know for yourself give an advantage should be disabled both pub and cw. But for tournament typ games like clanwars though I don't play no more I think that all skins should be dissalowed + sounds. To make the game more fair for both sides.

Myself I don't use skins at all not even a reticle

Thats exactly why I brought up the cw.cc disscusion, supposibly they believe they are better than average people, but so would anybody be if the 500 sniper was purplish green, the ramjet was yellow, and etc. Even the matrix stealth thing, when you get close to a stealth, it makes it more visible and noticable And recticle, well we all know the default one is buggy and not accurate, so even switching that (or the hud) is an advantage De7, your defending the spongebob advantage c4? If im beaconing, I place the beacon, put my c4 behind, and 1 clip of my pistol to cover the c4...well, if the c4 is f'ing yellow, that idea is useless...

Anyway, I know some people will say that "its my game, and I like to make it look cooler", thats ok, untill it gets to a point to where your skins give you an unfair advantage against everyone else. I also know making all server pure mode is not ethical atm, but something along these lines could (should) be implemented

I think you're stupid if you think it helps you more than it hurts you. Besides, what are the chances of that affecting a game? 1 in 300? That's a rough estimate, and it probably wouldn't affect it if you could just LOOK. It's not hard to see, not even if there's bullet holes around it and the ground is matching/wall/whatever is matching. So even if it did, and it happened one out of 300 games, you said it's a SIGNIFICANT ADVANTAGE. I don't use skins, except a reticle which i've used for the past 2 years, it doesn't give me an advantage except that by now I'm just used to that one than I am with the custom reticle. Before that reticle, yes, I used the custom one, for about 2 and a half years. I did use skins, though it was a hotwire one and it wasn't a bright skin. Oh, and I also used a PT skin (Try saying that one's an advantage - I double-dare you, unless you think taking an extra second to absorb the PT is an advantage)
