To setup WOLSpy you need to use version 1.1.0.22.

You need to configure your server.ini file in the FDS with the appropriate port settings:

GameType=WOL

Port=49510 (example port numbers)

GameSpyGamePort=53200

GameSpyQueryPort=53400

AllowRemoteAdmin=True

RemoteAdminPassword=password

RemoteAdminIP=127.0.0.1

RemoteAdminPort=54200

WolSpy should pull these values in when you run the setup.

So when you start the RenegadeFDS program, then you run the WOLSpy and it will connect to GameSpy.

Hope that helps.

Tony

If you need WOLSpy 1.1.0.22 you can get it from the link below.

<http://www.tonyroldm.com/renegade/RenegadeFDS/WOLSpy/WOLSPYBuild22.exe>
