I use renguard 95% of the time, when i play on my XP machine (which although has chitty graphics) i use it 100% of the time, then when im on my 2k machine (much better graphics) I get the overbuffer thing alot, so I just select Game.exe, + Renegade.exe and hit enter, so it runs the first one, i might get the error, then the other starts up, I find this causes me to get the error less often, although it could just be me
