Alright, When I try and Instell Renegade, Everything is fine.
But when i have to download the required patch, it goes to 100% and freezes....the game isnt scratced and ive tried three times uninstalling it, and reinstalling it.......any help?

SS If you want?

Actually, come to think of it....my windows firewall asked me to block it or unblock it when i was FIRST installing the patch...
could it blocking it a second time?
And if so, how do i turn it off.....
