woops, err sorry. any chance the moderators could fix the title (please). didn't think of it read that way.

i have just tried using both of them, alot easier. but in LE the rear wheels move (turn in circles) when i move the vehicle around on the level, and in game it doesn't exist. it wouldn't be weight making it dissappear because i set that to 1000, sus height to 1 etc etc.
