I already have a working NSIS installer for BRenBot 1.50 which could be altered slightly to install client side scripts if you want it.. all you need to do is change the registry key it looks up from the FDS one to the Client one (or add both)

And 3.1.2 still crashes on alt-tab... When you click to maximise again from taskbar the screen turns brighter for a moment, then pauses, and then Renegade just closes...

This time it had a crashdump though (First time it's ever given one with this)

EDIT;

Download mirrors;

Nessicary files only

Nessicary files + Source Code folder
