Merovingian wrote on Mon, 22 January 2007 08:14 Install the application on both systems, that way it will install registry settings and keys for each system pointing to that external hard drive of yours.

That would work providing you made sure that the drive letter of the external HD didn't change as you added other portable storage devices, which can be done from Computer Management.

At least, I assume it would work, seeing as I have many programs cross-installed pointing to a network storage device here, and they all work!
