If you are running windows xp then go to your controll panel, then go to the display settings, click on the settings tab, click on the advanced button. click on the monitor tab. select the box so that it doesnt show modes that the monitor can't display. Then select the drop down box to see what you monitor can go up to.

Failing that, look at the back of you monitor, there will most likely be a silver sticker on it telling you the max refresh rate, or it might be branded into the plastic case on the back.
