Like the IPBot plugin provided with BRenBot 1.50 but stores all the information locally in a database and has the option to upload the local database to a website database

Download

Server Rules

Replaces the default single rule for all maps with a set of rules for each map.

Download

NOTE: The IP Database is not an add-on for IPBot but an alternative for those that do not wish for their players information to be public to anyone that can download and use IPBot
