I have seen this on other forums and tried to find a solution but no luck. I got the dll from the renegade fds which is a newer version but doesn't seem to work.

Anyone that has a working wowapi can you post your WOLAPI.ini and all so post the version number of your wolapi files.

Also you could package your who Internet folder for me.

I have TFD it worked before. I have reinstalled it many times with no luck. Also reg keys might help.
