v00d00 and I (my idea but v00d00 is doing all the hard part) are working on creating a "quickinstaller" that will install a fully updated copy of renegade. I have a vista PC here and will be sure it works on that before we release it.

The installer installs a fully updated 1.037 Renegade client. You can optionally install RenGuard or just the WOL components.

The installer also makes you enter your serial just like the real installer, so that this is not a "warez" version of renegade.
