... I downloaded a copy onto my laptop yesterday and have been playing it fine(besides a little slow because its a lil old), and recently tried to install it onto my destop. It gets unzipped.. then I come to a screen where it tries to install something called FastCapPro. I've tried installing it 3 times and the same thing happens.. Anyone know whats up? o_O Should I just try to re-download it? Because I copied it to my brothers laptop just fine.
