Hey guys,

I was playing some DBZ yesterday and the idea popped into my head for an energy ball. So i started on this replacement for the ion beacon. This is the back model. It is in a containment case. when it is in first person it will look diferent! but thats a surprise!

\*note\* still trying to find a nice aluminum looking texture for those purple bars. Also, I will be putting glass in if i figure out how to do it.\*
