Subject: Need couple beta testers for TSR (TeamSpeak Regulator)
Posted by Try_lee on Sat, 14 Jun 2003 12:05:16 GMT

You don't understand what?

TeamSpeak is a gaming chat program which allows you to communicate easily through microphones. The program Blazer is working on will automatically put you in a channel when you join the game so that you can talk to your team without the other team listening in. This means it's both easier for the user and ensures the teams communications aren't being spied upon.

I hope that was what you were confused about...
