i made a "!test" command.

basicly what his does is make a "Large_Blocker" and then teleports you onto it as well as the person you want to test. after 60 seconds, the "Large_Blocker" is destroyed. what do you think? good idea? or just plain ol' crap?

it make the "Large_Blocker" 20 meters above where you are standing. thanks to Mero for telling me the preset for the "Large_Blocker"
