You said the PC is slow.

Try Start/run/msconfig/ then select the very last tab on the right, untick all the boxes until you have only the antivirus boxes ticked. Press apply/restart now........and that will be everything taken away from the startup menu that may be causing the PC to run slow.

Now check your system with Ad-aware, Spybot etc.

I removed CTFmon.exe yesterday and have no problems. Start-up is done in less than a minute from booting up, to a fully functional screen.
