Well, if someone took a screenie of me, it would be a compliment. If they think that I am so good that they need a screenshot, then that just proves that I am better than them.

Sorry to burst your bubbles, but I'm just afraid that a "smarter" hack would be made. This new hack would be able to give clean screenshots like the MSX hack pack for various games like CSS, BF2 and BF2142. It's a pain in the neck to admin when these super advanced hacks come into the playing field.

I think I speak for everyone when I say that hackers should just burn and die.
