I've installed and executed the .exe file.. somehow it seems to improve everthing.. but it didnt solve the problem. folowing some specific details:

Some good results:

- while seeing 'Testing bandwith' i got about 354 FPS.
- Weird retangle block problem is gone!
- game looks acceptable (dont know for error message cuz i haven't played that long today!)

Problems:

Entered a server with the 'Field.mix' map. I spawnd first at AGT. and when i looked at the 354 FPS mark in the top right of my screen.. it fell in about 4 seconds to 2 FPS.. (there was a mamoth tank outside of the AGT fireing at some sniper in the field... but no hard action) then i walkt to the 'tunnel' and my fps went up to lets say 10 - 15 FPS.. but gaming isn't relaxed while having that low FPS.

So someone has another idea?
