If by exact location, you mean buy it and it apears there, make a daves arrow preset, set the vehicle button to the daves arrow, and make the daves arrow use a text cinematic that'll spawn it at the given co-ords.

If you mean buy a beacon and deploy it type of thing, just a powerup or something for a beacon and attach a test cinematic to the beacon preset or something.

ACK, one tiny question.......if it sucked......why did people bug him to continue it or his other mods when he said he was done? Just a question.
