Just some info on the error:

[i]Connection reset by peer. [/i]

An existing connection was forcibly closed by the remote host. This normally results if the peer application on the remote host is suddenly stopped, the host is rebooted, the host or remote network interface is disabled, or the remote host uses a hard close (see `setsockopt` for more information on the `SO_LINGER` option on the remote socket). This error may also result if a connection was broken due to keep-alive activity detecting a failure while one or more operations are in progress. Operations that were in progress fail with `WSAENETRESET`. Subsequent operations fail with `WSAECONNRESET`.

It's basically saying that the rengaard network went down or restarted. probably nothing to worry about, although, proper error checking in rengaard should of been implimented in the months of waiting instead of using the ugly windows error codes.
