Can you help please?

I placed the .dll's and .sdb's from 3.2.1's release into my renegade directory then tried to start renegade. I was previously using 2.9.x and it was fine, now when i launch game.exe renegade tries to start, but then I get an error message saying "bhs.dll not found or loaded correctly". Whilst I get this error message, it also makes my screen go a different colour. When I lclick "OK" it goes away.

Here is a screen shot.
