Drahau wrote on Wed, 25 April 2007 09:20 Well I have encountered another bug. When the RenGuard was patched it starts , I can see it on the task bar but nothing happens, not even a window pops up. When I went to my Ren folder I tried to start the game.exe manually and I received a response that game.exe is not a proper win32 file. I use Windows XP, fully patched for that matter. Alas, if I run game2.exe it works fine but the game isn't run under RenGuard. What now ?

The auto update for game.exe somehow failed - you can download it at [http://www.renguard.com/\\_auto\\_update/game.exe](http://www.renguard.com/_auto_update/game.exe)

Regards,  
mac
