AoBfrost wrote on Wed, 25 April 2007 11:39 Well, you see theres a problem, I'm not aiming toward any of you individuals, but I say that if you believe that you are truly catholic/christian then why believe in the big bang when they contradict what you claim you are, if you truly christian/catholic then you believe God made you, and not the way crap science brings out today, all of these big bang theory's are just taught in schools because some don't want to learn about creation, so then others who might want to are disabled from the ability to learn about it, teaching only 1 viewpoint in school is what then make kids believe that's how the world started, schools today don't even give the chance to teach creationism anymore, I think schools should have 2 science classes during the time when they teach about evolution, 1 for evolution and 1 for creationism.

Flying spaghetti monsters anyone?

The problem is that if you choose to believe in a god/religion you shouldn't be forced to believe every single part of it, science allows for ideas and theories that are not set in stone - a scientist is happy to be proven wrong and theories such as Darwin's theory of evolution are being modified all the time to include new evidence and become as accurate as possible.

Creation can be taught in schools as part of religious education, it CANNOT be taught in the same way as evolution because it has no scientific basis only belief that is down to each individual.

creationism isn't a science, there is no evidence.

evolution is supported every step of the way from fossil records, comparison of species living today, microbiology, embryology and many other sciences.
