JPNOD wrote on Sat, 28 April 2007 01:21 To be honest the components look "OK", but there is something which noone has mentioned yet and thats the most important of all.

The Powersupply.

From what I can see Cyberpowerpc sells cheap cases with el cheapo powersupply. Which means the lifetime of your PC goes down by far because a good powersupply is important for the stability of your PC.

For example

)Sigma Gaming Orca Mid-Tower 400W Case  
has a unknown powersupply.

In other words

--> they sell PSU's but youle have to pay extra to buy a good powersupply I'd recommend doing that.

Also from what I see the cases they sell look very plastic ( Eventhoug on pictures they look good )  
Real brands: Chieftec, Antec, Lian LI.

My brother still currently uses the PC from Cyberpower my family bought all those years ago. It still runs quite well, but he has had to put a few upgrades into it since then. Upgrades like a Videocard, RAM and processor. Upgrades ran him about \$300 total. Again, he only did this to upgrade and not because the components failed. I believe he still has his previous powersupply.

As the price may tell you, he didn't get top notch upgrades, just the essentials.
