---

I'm located in Sydney Australia and until now I've been gettin 220-250ish ping in almost all US servers with my 24000k connection. However recently Renegade has been showing me RED ping circles and numbers of 250+ in the advanced game listing therefore giving me 400+ ping ingame. There has been no change done by my isp and I still download at just less that 2mb a sec so my speed hasnt been affected at all... this is only happening in Ren, all my other games run fine. Has anyone ever had this issue or know anything that can be done?

Edit: lol shit wrong section wasn't paying attention, my bad
