I had Renegade and RenGuard working great before (didn't have to use game CD, fast map loads with no text on loading screen, etc.), but had to uninstall Renegade (deleted Westwood folder also). I reinstalled Renegade, went through the Multiplayer Online > WOL > Advanced Game Listings to get the game update, and installed RenGuard. The problem is, RenGuard won't auto-update now to give me CP2. It runs, but now I have to use the game CD and the maps load as slow as they did before I got RenGuard.

Can someone help me please? Thanks!
