Yea I noticed that I added two PSU's, it's because I switched cases and the first one I added didn't have a PSU.

I decided on the fusion, it's an awesome deal:

Coe 2 Duo 6300 (1.86Ghz)
2048mb RAM
nForce SLI motherboard
Geforce 7900 GFX (Will add a second when I can afford)
250GB HDD
Funky Gamers case with side window and blue neon
19" LCD Monitor
Vista Home Premium (I don't plan on shelling out on another OS in 6 months)

It came to £611, which I was pretty happy with - just need to get C&C3 + Supreme Commander and I can see how good it really is
