Take your pick. In the renegade modding community we use basically 2 series of programs for 3d modeling.

The first being gmax, renegade gamepack enabled.

It supports a wide variety of renegade specific tools. But, it isn't as powerful as 3ds max.

Get it and the gamepack with instructions on how to install at

[http://www.renhelp.net/index.php?mod=Content&action=view&id=Getting+Star ted](http://www.renhelp.net/index.php?mod=Content&action=view&id=Getting+Star+ted)

The second primary program is 3ds max. we use versions 7 and 8 because they are the only ones, thus far to support our tools. This program is more powerful then gmax, but some of the tools aren't the greatest.

You can get a trial of version 8 somewhere on the net. Or you can obtain version 7 "by other means".

All the needed tools and plugin's for these programs are here

<http://www.renhelp.net/index.php>

As well as almost everything you will ever need when it comes to tutorials.

Jamie
