P4TCH wrote on Sun, 20 May 2007 06:26i always get a badtest error when i run renguard, so it just crashes and open itself again, qithout the error. I run renegade as i usually did and no multiplayer games appear...kinda annoying lol
In the folder there are 2 bandtests 1 is bandtest.dll and another 1 called bandtest.original.dll
Somehow, I think you installed SK's bandtest.dll onto your copy of Renegade, which broke it. Copy bandtest.original.dll over bandtest.dll and all will be well again.

P.S. SK's bandtest.dll is only for servers, didn't you read that in its readme file?
