Ok I updated from 2.9.2 to 3.3 and I was playing in MP's Ultra AOW (2v2) map was hourglass, I was in a med shooting at an arty on the right hand side;

Im just shooting at this arty and my game freezes and im thinking ok hurry up and crash so I can rejoin but when it finally crashed (about 30secs) it went to desktop saying Renegade has encoutered an error blah blah blah so I press ok and try to rejoin, but now when I try to rejoin WWConfig pops up and I press ok it loads game2.exe and then it crashes.

Here is the crashdump and except.txt (Don't know if that one is needed but i'll upload it anyways since it got edited at the same time as crashdump.)

File Attachments
1) crashdump1.txt, downloaded 93 times
2) _except.txt, downloaded 120 times
