Reborn wrote on Thu, 14 June 2007 02:08I am using 3.4 with the fix from saber hawk to address the memory leak, my FPS seems to be around the 35 mark. This is not good considering it has been happily sitting over 500/600 with 3.2.

device manager, as you can see, the cards seriosuly pwn. i should not have a fps floating from 35 to 45.

Just like to add that you're not using the latest drivers for the Geforce 7 Series. There was a new release like 2 weeks ago.
