SBBO isn't used for the LAN exploit...

If you can't handle those performance marks, I suggest you try using my mum's laptop in a sixty player server, the laptop in question doesn't have it's own functioning screen, the battery doesn't work, and the CMOS likes to randomly clear itself out. The sound ocassionly breaks if it thinks the PC isn't broken enough. Not to mention it doesn't have a hardware 3D accelerator.

Making the average performance about FPS-20 (Detail's down) SFPS-60 ping-250 or more and KBPS - 220 or more.

You, my friend have it easy.
