CarrierII wrote on Wed, 20 June 2007 19:55 That's true, it is, however, true, that in most tests, a core 2 duo will beat an AMD processor, for now. (or, at least, I think so, lol)

It's an opinion. You cannot directly put 2 processors (different makes) together and say one is better.

Some processors have more math functions, some people don't think thats better. Some processors (AMD) have more registers, does that make it better? Intel are now releasing duel core processors, does that make them better than an AMD processors? You can't say, because they are too different from each other. Duel core doesn't mean more power, it just means it can handle more threads than a single core processor. If a processor is single core, it can have a faster clock, have a bigger cache, have more registers. Put 2 of them in one package then it is halved. However, if you can use both cores at the same time then you have a winner. One thread doesn't have to wait as long to be processed.

Everyone is entitled to an opinion but when they are telling someone to stop arguing i, (in my opinion are not entitled to one).

This almost is the same for graphics cards.
