z_Console_Input_Killed_2 if you are using the latest scripts.dll

Can do an admin msg with it for input1 for ex:
amsg Congratulations you have won!

for input2:
win 1

or a gameover command...

note: do not enter comma's in the messages, will crash the script
then.. trying to do a msg like "msg congrats, you are the winner, good go." will crash because it
breaks the script on the comma..
I didnt know that would happen at first because i used it for
basic and simple fds commands only..
