---

Alright, I receive a message saying the following every time I try to start renegade:

Renguard 1.0323

Error Code: 00000005

(see the "renguard error message" attached to this posting)

When I tried updating the core to fix it, I received this message:

(see the "screenshot of renegade problem" attached)

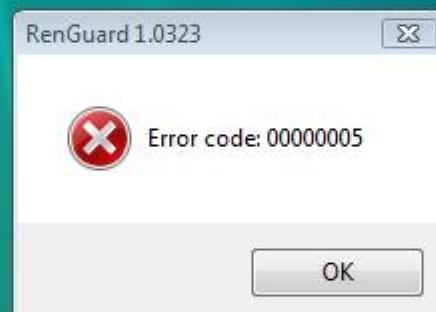

I can start renegade if I run game2.exe, but it runs without renguard. Curiously enough, I also managed to start renegade with renguard by running RenGuardPatcherv1.2.exe instead.

Any thoughts? Questions?

Yes, I am running Windows Vista. If you want my hardware specs, I'll give them to, but they shouldn't be affecting this. It seems to be a software issue. Just wondering if anyone else had run into similar problems and had isolated the cause or had found another solution

If you experience problems with renegade (e.g. renegade wont start, always.dbs missing, wrong language), make a note of what this program says and report it to Blackhand Studios.
