Dragonade by vloktboky/Whitedragon can do that too, and this screen was taken in May 2006. Black-Cell admins using the restricted commands in Dragonade can do many other things, including creating a shower of vehicles from the sky, or changing the person's model or flying vehicle model into pretty much anything else (rocks, beacons, beacon effects, toilets, even entire maps - especially fun when the character is an SBH), and even more stuff. Unfortunately, they hardly ever break these commands out anymore, as they're usually only used after the conclusions of our once-abundant Regulars vs. Mods games.

Now with the .lua plugin that Dan made, Everyone can make there own special commands that do exactly what you said and more. ^^
