Dang, edit ran out of time right as I clicked "Apply Message Changes".

Well that was the patch for version 1.1, apparently that fix for XP needs it to be that version, but I can't get it to update for XP, arg!

Oblivion, don't suppose it works on your computer right now, because if it does, could you just copy the MW2 Mercenaries directory, and put it on FileFront/planet or something like that so I could download it and past it over my directory?
