I was playing yesterday for the first time in a month and as I just got to the Advanced Listings page Renegade crashed to desktop. This normally never happens so I was interested in this.

Renguard popped up as it normally does but it had a line output that I haven't seen before.

I attached a screenshot of RG, what I think is the most recent crashdump.txt, and my system info.

This could be nothing but I at least wanted to mention it.
