Hello all, for the last couple days, my Renegade has been crashing at random times when I play online. It just crashes to desktop, doesn't leave me a error message or anything. I didn't update drivers, I didn't mess with Renegade files in any way. So I reformatted my computer, reinstalled renegade and core patch 2, and it is still happening. It's not a firewall issue, and I've been playing renegade crash free for years. Please help.

I was thinking maybe it might have something to do with my renegade folder, so here is a screenshot of it.
