---

Ok, I got A motherboard, which has AGP, im having a crappy ati Radeon 9250+ atm which just can play Counter Strike Source on High Details without AA or AF, and a fps of 20-25 max in ren ( 1280 X 1024 lcd screen ) Anyway, im planning to buy this card:

<http://www.bestbuy.com/site/olspage.jsp?skuld=8040782&st=x1950+agp&type=product&id=1157068455153>

Seems to be one of the best AGP cards, we also got the Nvidia 7800 GS, but according to some reviews i read, x1950Pro tend to have slightly more performce, ok, to the point, i got everything what the card needs BUT i dont know what power Supply i got I bought this 'desktop' but i have no idea what Power Supply i got its a MSI pc, anyone know how i can find what power supply i got? Thanks for reading
