Ha, I'd still be using mine too, but due to a combination of a fan failure and the thermal paste going bad, I figured it would be easier/cheaper to get a new Ti4200 (which can be gotten for what, something like \$25 on eBay?) than fix it. I just opted for a 6800 series instead.

Yeah, the 7600GT is exactly in the same spot the Ti4200 was. They were both cheaper AND better than the last top of the line card, and they were both within VERY close reach of the next up model.
