All I've seen is a pathetic attempt to gain sympathy, rather than provide facts.
My reason is in my letter. The very first one.

Bluethen, that is very simple. Simply "E">"5">"ESC">*L.Click* and loop. The purchase terminal is already right in front of you and you can simple throw it on the floor without turning away from the PT. That isn't a macro.

lmao. It's impossible to shoot or throw things throw a pt.

btw: I just do X>E>5>Click>E>5>Click>E>5...

and those flares arent revealing a pt, they're revealing a ladder.
