Example:

```
Quote:char *message "!kick Sn1per74 C++ newb";
char buf[512]; //buffer for the function
char **toks;
toks = strtokener(message, buf, 3, ' '); //function call
Console_Output("%s has been kicked out of the game for: %s", toks[1], toks[2]);
```

```
//kick code here
```

```
delete[] toks; //cleanup
```

So toks[0] contains word1 (!kick), toks[1] contains word2 (Sn1per74) and toks[2] contains the rest of the string

Good example.
