Make the generic Switch...
Then double click the generic switch on the map, so a box appears.

Click the scripts tab. Add JFW_Character_Buy_Poke, and copy and paste the preset name in. In this example I used the player Patch, on GDI.

Fill in the other parameters. The cost (in credits) and the player type, which is the team who can poke it. 1 is GDI, and 0 is Nod. Click OK on the Script Definition window and OK on the edit object window. Your script was added. Go into the game and try it out!
